DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Morris, US Patent 4,715,090. A vehicle hinge with first and second hinge leafs connected via pivot pin 3, with retention means 22, and the device operating as claimed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morris in view of German Patent DE 1584006 B ('006). Morris teaches the

claimed invention except the use of ball bearings as retention means. Patent '006 teaches the use of ball bearings for ratchet type release. It would have been obvious at the time the invention was made for one skilled in the have included this in the design of Morris for the purpose of gaining the benefit of a ratchet type release.

5. Claims 4-6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morris in view of Patent DE 1584006. The combination does not explicitly teach a shell shaped cast leaf as claimed. It would have been an obvious matter of design choice to make the different portions of the device of whatever form or shape was desired or expedient. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al.*, 149 USPQ 47. Such a modification would have produces no unexpected results and would not have been critical to the design.
